Weed Management in Agronomic Crops for a Changing Environment

The latest information on weed control will be presented at the Weed Management in Agronomic Crops for a Changing Environment online event on Monday, Nov. 15, 2021 from 9:00 AM-12:00 PM (Pacific Time.) The lineup of UC Cooperative Extension (UCCE), UC Davis and Fresno State experts will discuss why we see horseweed and hairy fleabane in most parts of California year-round, herbicide trials in drill-seeded rice, integrated weed management for water-seeded rice, Italian ryegrass control in small grains, cover crops and weed management, and alternatives for managing weeds in alfalfa within changing pesticide regulations.

“We are dealing with a variety of pressing issues in weed management in agronomic crops, including new instances of herbicide resistance, increasing regulatory conditions, limited water, and less labor availability” said Whitney Brim-DeForest, County Director, UCCE Sutter-Yuba Counties, who is chairing this webinar event. “Researchers in California continue to tackle these issues in a variety of novel ways.”

Presenters include
- Kassim Al-Khatib, Professor and CE Weed Specialist, Dept. of Plant Sciences, UC Davis
- Tom Getts, Weed Ecology and Cropping Systems Advisor, UCCE Lassen, Modoc, Plumas, and Sierra Counties
- Michelle Leinfelder-Miles, Delta Crops Resource Management Advisor, UCCE San Joaquin, Sacramento, Yolo Solano, and Contra Costa Counties
- Sarah Light, Agronomy Farm Advisor, UCCE Sutter-Yuba and Colusa Counties
- Konrad Mathesius, Agronomy Advisor, UCCE Sacramento, Solano, and Yolo Counties
- Anil Shrestha, Weed Science Professor, Dept. of Viticulture and Enology, California State University, Fresno

The cost is $22 (if registered by Nov. 10) and $32 (if registered after Nov. 10). Registration is underway now—click HERE or visit https://registration.ucdavis.edu/Item/Details/764.

The course is approved for 2.5 ‘Other’ DPR and 2.5 ‘PM’ CCA continuing education units.
